

Virtual Private Network (VPN)

Private LAN network over Internet

Why using VPN ?

Save Cost : pay Internet bill only

A real cable network between two remote location cost you up to many thousand monthly!

Share infrastructure over Internet

include File folder sharing, Fax Server, Accounting and management program*, private web, etc.

More security over Internet

If Web Server, Exchange Server or Terminal Services just need an ID and password to access over Internet, we can limit the network to VPN only by using tunneling protocol.

What is Virtual Private Network (VPN) ?

A virtual private network (VPN) is a private data network that makes use of the public telecommunication infrastructure, maintaining privacy through the use of a tunneling protocol and security procedures. The idea of the VPN is to give the company the same capabilities at much lower cost by using the shared public infrastructure rather than a private one.

You need an expert for Virtual Private Network (VPN)

We have experience in setup and configure Microsoft PPTP VPN, Zywall IPsec VPN with Firewall, VPN for PDA Sync. For **real VPN DEMO** please call Mr. Ong at 012-2399889.

Here are the solutions, Action now!
